

Role Description: Ruby-on-Rails Developer

Objective of the position: Work as part of a small team to maintain and support a Ruby-on-Rails web application, and to design and implement additional features based on requirements outlined by our marketing team and clients.

Candidate will be expected to plan, research, develop logic, code, test and deploy while working in a fast-paced environment. Candidate must have effective communication skills and the ability to interact professionally within a diverse group of staff. Candidate must be able to work productively in teams and to teach or instruct others while effectively prioritizing their own tasks. Candidate must be prepared to learn a diverse range of technologies.

Job Description

Rails Developer's are expected to perform the following functions:

- Development of applications using full project life cycle
- Maintenance and support of existing operational systems
- Document and test new systems to ensure error free code
- Review existing computer programs and recommend refinements, improvements, and enhancements to ensure most efficient methods are employed

Person Specification

- Communicate in the English language by phone or in person in a one-to-one or group setting regarding technical or non-technical subjects.
- Observe, compare, or monitor data to diagnose problems
- Work both independently and in a team within established procedures and policies
- Diagnose technical problems and recommend solutions
- Able to adapt to the companies needs in the way we deliver our service

Background/experience

- 18 months to two years of experience in computer operations. Other combinations of education and experience that meet the minimum requirements may be substituted.
- Ruby-on-Rails, HTML and CSS for developing dynamic data driven sites.
- MySQL and / or PostgreSQL experience.
